

YPACK

Press Release Y-PACK - June 2018

Y-Pack is proud to announce a partnership for Paint treatment with **ProTech® Monte-Carlo**. We have been testing dozens of products under real-yachting life conditions and in the lab for months prior to choose our partner.

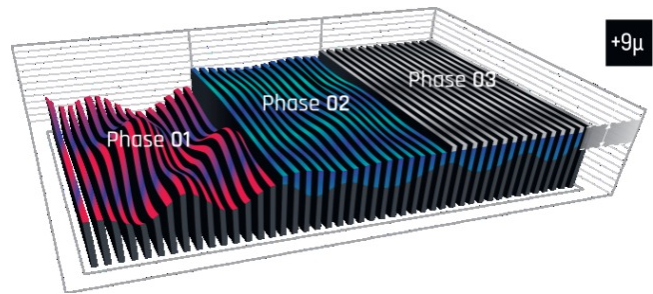

We chose **ProTech® Monte-Carlo**

- For their 25 years of experience
- For their professional approach to the process.
- For their internalised R & D, with direct links to the applicators in their centres.
- For certified and proven results by independent laboratories

Protech is revolutionizing the protection of painted surfaces with a radically different treatment of “ceramics” offering **hydrophobic, oleophobic and anti-aging protection**.

A True protective shield, ProTech® 3D+ treatment, **9 microns thick**, refines the deep colour, **extreme glossiness** and freshness of your painted finish. Protech is the only **certified protection** not requiring the use of special product prior to paint touch up operations.

The repellent properties keep the painted surfaces clean longer and ensure **effortless cleaning**. ProTech® 3D+ treatment is applied in 3 phases exclusively by our certified Y-Pack technicians using dedicated equipment.

ANTI-ADHERENT

Surfaces can be extremely slippery. Water slides on the treated paint, and drying is faster. Washing time and water consumption is greatly reduced.

ANTI-SOILING TREATMENTS

The treatment considerably slows down the build-up of oil and dirt pollution. Treated surfaces stay clean longer. Less washing, more time for the important things.

ANTI-AGING

Treated paint ages 10 times slower than an untreated paint. Colours are more intense, surfaces are brighter. Glossiness is maintained.

Y-PACK offers its services anywhere around the Mediterranean Sea.

- Professional application
- Certified results
- 2 years warranty
- Providing maintenance Care-pack and instructions
